

# NOTIFICATIONS FOR SHAREPOINT®

The Qualitem Notifications for SharePoint® Foundation is a flexible notification and email service.

Notifications can be used for a range of purposes, from sending out reminders when important documents are due for review, to monitoring when contracts expire and relevant stakeholders need to be notified. Content can now be proactively reviewed periodically with the help of Notifications.

Notifications runs on the built-in SharePoint® Timer Service, enabling it to be monitored and tracked like any other SharePoint® task. An easy to use configuration screen is provided within Central Administration to modify the reminder schedule.

A comprehensive reporting features supports the ability to see all notifications set across your site lists and libraries, as well as across the entire site collection; making it easy to manage the reviewing of content. Notifications adds significant value to Microsoft SharePoint® Foundation and raises the bar to a new level for industry Content Management Systems.

SharePoint® Foundation customers now have the opportunity to build and manage rich web content with incorporated publishing capability for managing the approval of web content. With out easy install process, Notifications is installed quickly and easily across one or many site collections to give you the power of full web content management on the SharePoint® Foundation platform.
