# QUALITEM

Modernizer
For SharePoint

Fast-Track Classic to Modern SharePoint

Classic (Old)

Modern

Overview

Putting the power of content modernization in to the hands of everyday users leaves them feeling empowered to achieve great results. Modernizer is for all levels of expertise and supports many legacy web parts.

Modernizer reads Classic SharePoint pages and modernizes these pages in to equivalent Modern SharePoint pages. It makes light work of difficult and cumbersome migration by migrating content and web parts in to new modern page layouts. Modernizer will also report on the potential success of the migration effort.

Modernizer works directly within SharePoint library views to support either single or multiple page modernization. If you are looking to bring your classic SharePoint pages in to modern SharePoint, Modernizer can seamlessly and efficiency convert your page content.

For organisations using custom web parts, please contact us to find out how to integrate these in to your modernization experience.

- ✓ No need to learn about modern page structure
- ✓ No need to understand how to convert classic to modern pages.
- ✓ Custom metadata supported and migrated.

- ✓ Bulk migration supported.
- ✓ Pre and post migration reporting options.
- ✓ Remediation requirements are highlighted for better management of custom web parts.

Benefits

Integrated with SharePoint Online
Modernizer installs in to your SharePoint Online tenancy for a seamless modernization experience.

Automates Classic to Modern content
Converts supported web parts to modern web parts simply and easily. Converts embedded web parts when inserted in to content areas of a classic page.

Report-only option
Run a report in inspect-only mode to generate a detailed report outlining the level of success and all remediation steps.

Page layout support for Publishing, Wiki and Web part pages
Mirrors the classic page layout in to a modern page layout to support similar layouts.

Enhanced remediation of web parts
Easier remediation of web parts using "remediation information" placeholder web parts.

Title banner support options
New banner styles and title options are supported for single or bulk page modernizations.

Single or multi-pages at a time
Page-by-page or bulk migration is supported by selecting pages to modernize.

Best practise modern page creation
Text, images, videos and list views are converted in to separate modern web parts.

Metadata migration
Metadata field names that match between source and destination libraries will be migrated automatically.

Validation and notifications
To help guide you through the step-by-step, we validate and notify you of areas to look out for during the modernization process.

Easy installation
Via SPFXHub.com with pre-requisites to ensure, the install works first time!
